TESTING THE STRENGTH OF SUPPORTS OF A SOLAR POWER PLANT USING A CRANE SCALE

CRANE SCALE | KERN HFD

The supports for a solar park are driven into the ground to a depth of around 1.60 metres. A crane scale is used to ensure the tensile strength, which varies depending on the nature of the ground. This enables quick and precise testing to avoid later complaints and liability claims.

Model	Weighing capacity	Readability	Net weight	Price
HFD 6T-3IP	1500 kg; 3000 kg; 6000 kg	0.5 kg; 1 kg; 2 kg	15 kg	€ 920.-
