

PATHOLOGISTS  
WEIGHING OF BODY ORGANS DURING DISSECTION

BENCH SCALES | KERN FOB

In an autopsy, an internal examination of the dead, the examination of the dead person, especially his internal organs, is an important criterion in order to determine the circumstances under which the person died. The organs are assessed according to size, shape and color, with changes deviating from the norm being recorded in the descriptive part of the autopsy report. The weight of an organ is also an important parameter for assessment. That is why the scales are an integral part of the pathology equipment
