

PCB ASSEMBLY
REPAIRING A CIRCUIT BOARD UNDER THE MICROSCOPE

STEREO MICROSCOPES | KERN OZM-9

If there is a fine hairline crack on a printed circuit board, a little bit of solder often helps to reconnect the two ends. These hairline cracks are often so fine that they cannot be seen with the naked eye. Depending on the size of the conductor track, it can be helpful to work with an illuminated microscope, after all you need both hands free to operate. This procedure makes the work much easier

| Model | Optical System | Tube | Eyepiece | Price |
|---|----------------|-----------|--|-----------|
| OZM 952 | Greenough | Binocular | Eyepiece HSWF 10x / Ø 23mm with anti-fungus, high eye point | € 1,750.- |
| Suitable Accessories: <ul style="list-style-type: none">• Solder protection lens OZB-A5614 - OZB-A5614 - €50.- | | | | |
