CELL STUDIES WITH A MICROSCOPE IN THE FIELD OF CYTOLOGY

TRANSMITTED LIGHT MICROSCOPES | KERN OBL-S

Cells are researched with the help of microscopy in order to understand and elucidate biological processes at the cellular level. Most cell examinations concern cell smears in oncology or biopsy material. Dark field microscopy, on the other hand, can provide valuable information about different cells in living blood. For the various examination methods, it is advantageous to use a microscope that can be used for both procedures. The quick conversion of the microscope saves time and money

Model	Optical System	Tube	Eyepiece	Price
OBL 137C825	Infinity	Trinocular		€ 1,750

Suitable Accessories:

• Darkfield Condenser OBB-A1422 (0,85-0,91 | fixed) - OBB-A1422 - €250.-
