

BACTERIOLOGISTS
MICROSCOPIC OBSERVATION OF BACTERIAL COLONIES

TRANSMITTED LIGHT MICROSCOPES | KERN OCM-1

With an optimal food supply, optimal growth behavior takes place in bacteria (Escherichia coli). This means that every 20 minutes the bacteria undergo a dichotomy. This proliferation of bacteria can be observed very closely under the microscope. In order to be able to make molecular-biological statements, bacterial colonies that can be seen individually under the microscope are required.

Model	Optical System	Tube	Eyepiece	Price
OCM 161	Infinity	Trinocular	Eyepiece HWF 10x / Ø 22mm with anti-fungus, high eye point	€ 3,790.-
